

A budget grid system with impressive credentials

Information

- Available in green as standard
- Black, brown and white available
- Can be laid directly onto grass
- Grass or gravel fill
- Made from recycled materials
- Easy pallet stacking
- Up to 10 tonne loading

*An exclusive
PLASGRID product
not available
elsewhere!*

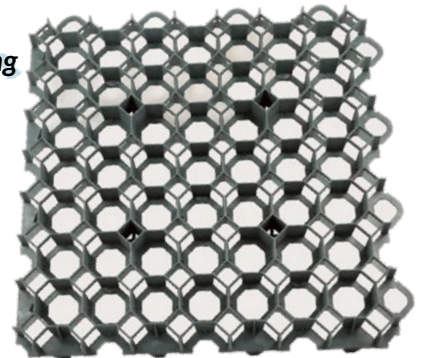

An ideal grid system when cost is a factor and some of the main features of more expensive models are less important.

PLASGRID can be laid in the traditional fashion of providing a drainage layer, geotextile membrane, sand screed and gravel infill.

For semi-permanent grass fill installations where ground conditions allow, PLASGRID can be laid directly on top of existing surfaces to provide a virtually invisible reinforcement method.

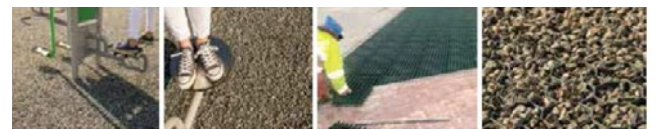

Bay markers are available which firmly pin to the grid and sub-base.

10t axle loading

Uses

- Caravan and motorhome parking systems
- Pedestrian pathways
- Vehicle access routes
- Overspill parking
- Shed, greenhouse and exterior office bases
- Landscape construction
- Events and festivals

Technical Information

Unit DIMS	470 x 470 x 65mm
Unit Weight	0.72kg
Metre Weight	3.146kg
Per Metre Units	4.4
On Pallet Metres	54.55
Pallet Weight	171.61kg
